Cavill Avenue, Surfers Paradise

Cavill Avenue, Surfers Paradise is a mall lined with restaurants, bars and fast food outlets.

Gold Coast City Council ordered an extensive upgrade involving landscape works. Designers redesigned the pavement to have simpler grades for pedestrian safety and, compared to pits used previously, more cost effective and efficient surface drainage. This was all made possible with a linear trench drain.

ACO's KlassikDrain with custom Stainless Wedgewire Heelsafe® Anti-Slip grates were specified, providing a heel friendly solution strong enough for the regular trafficking service trucks. The drain's proximity to the beach also meant that all exposed metal components required to be of a stainless steel construction.
