

Wharves & Docks

Commercial Wharves & Docks provide the most punishing environments for drainage systems, electrical pits and manhole covers. Busy maritime operations involve the movement of very heavy vehicles as they load and unload containers. The repetitive nature of heavy wheel loads imposes severe stress on apron areas, whilst the corrosive nature of the marine air environment requires only proven, reliable, quality products to be used.

ACO Drain grated trench drainage systems are available in sloped runs to allow for the efficient removal of surface liquids from level slabs. The trench comprises interlocking precast channels made from polymer concrete, a durable resin composite with excellent corrosion resistance. ACO's grated trench systems are either monolithic in construction for optimum security or are available with removable grates that are locked with boltless mechanisms into integrally cast ductile iron edge rails with anti shunt mechanisms.

As an ISO 9001 registered company, ACO has supplied a variety of products including container and passenger wharves and docks worldwide for over 30 years. ACO also manufactures high performance stainless steel drainage grated troughs, floor gullies and modular pipe systems ideal for use in terminals and other quayside buildings.
