

Wineries & Breweries

Wineries and breweries provide a punishing environment for drainage systems. Most steps in the production of alcohol require some method of quickly removing spills and runoff from wash down operations as well as the drainage of stormwater in external areas. Waste deposits from highly aggressive sugars associated with winemaking and the brewing process, combined with the very alkaline cleaning agents used during wash down operations; require drainage products to be durable and corrosion resistant.

ACO Drain grated trench drainage systems are available in sloped runs to allow for the efficient removal of surface liquids from level slabs. The trench comprises interlocking precast channels made from polymer concrete, a resin composite with excellent corrosion resistance. Channels come complete with integrally cast wearing edges in a choice of materials and have smooth impervious walls to ensure liquids are transferred quickly and safely to the secondary stage of drainage.

Channel systems range in widths of up to 300mm and are capable of withstanding loads of up to 90 tonnes. A wide range of grates available in a variety of designs in stainless steel, ductile iron, plastic and composites ensure that ACO Drain systems can cope with any winery and brewery application. ACO Drain grated trench drainage systems are fitted with patented boltless locking mechanisms which allow for the quick fitting and removal of grates, ideal for areas requiring regular maintenance.

As an ISO 9001 registered company, ACO has supplied a variety of products to wineries and breweries worldwide for over 30 years. ACO also manufactures Australasia's widest range of electrical pits, access covers, chemical containment systems and high performance stainless steel building drainage systems ideal for use in these applications.
