ACO Cablemate®

Amcom – Perth, WA

Amcom is an innovative information technology and telecommunications company servicing the needs of business customers and government departments in Western Australia.

Amcom's clients require a high level of security for the safety of their sensitive information. Therefore Amcom's network infrastructure also requires a high level of security.

Amcom chose ACO's PowerLok® cable enclosure as its trafficable cable pits could be easily and securely locked using a padlock.

Additionally the Class B load rated PowerLok® lid will support the majority of incidental traffic mounting the footpaths in the central business district.

To assist Amcom further, ACO included the Amcom logo on the PowerLok® lifting flap located on the lid. This assists Amcom's maintenance staff to easily identify Amcom's cable pits in a highly congested infrastructure network.

For more product information visit: www.powerloklids.com.au

Specifier: Amcom
