Brisbane Domestic Terminal Car Park

The new multi-level car park at the Brisbane Domestic Airport Terminal is the largest single structure car park in the southern hemisphere. For quick and safe passage of passengers to and from their cars, the building is connected to the terminal through the 'Skywalk' passing over the terminal road system

Integrating the new construction with the terminal frontage was a challenge for designers. New pavements needed to be carefully graded to meet with existing floor levels. Various ACO Drain runs, complete with Heelsafe® Anti-Slip grates, were used in several locations to ensure efficient drainage and compliance with all pedestrian safety requirements.
