

Airports

Airports provide the most punishing environment for drainage systems, electrical pits and manhole covers. 24 hour movement of very heavy loadings on runways, taxiways, hangars, access roads, and other apron areas impose severe stress on these hard surface pavements. The ever-present requirement for safety in apron areas means only proven, reliable, quality products are used.

ACO Drain grated trench drainage systems are available in sloped runs to allow for the efficient removal of surface liquids from level slabs. The trench comprises interlocking precast channels made from polymer concrete, a durable resin composite with excellent flow characteristics. ACO's grated trench systems are either monolithic in construction for optimum security or are available with removable grates that are locked with boltless mechanisms into integrally cast ductile iron edge rails with anti shunt mechanisms.

As an ISO 9001 registered company, ACO has supplied a variety of products including electrical pits and access covers to civil and military airports worldwide for over 30 years. ACO also manufactures high performance stainless steel drainage grated troughs, floor gullies and modular pipe systems ideal for use in terminal buildings.
