Brick pavers fit directly against the slot. For light duty pedestrian applications, pavers can be set on sand; for heavier duty applications, pavers should be set on concrete. Maximum paver depth 63mm to allow for 6mm bedding material is recommended.

10mm slot compliant to AS 1428.2 & AS 3996.

Used with K100 or H100K channel - Brickslot fits directly into the channel. Brickslot units are fitted with QuickLok for easy assembly to the channel unit. Half metre sections are available. Half metre access units provide access to the channel or in-line pit for maintenance.

End caps and accessories are available from the K100 and H100K range.

Brickslot Leaflet

Introduction to the Brickslot System
Brickslot - 10mm discrete slot for 100mm width channel
Brickslot

Brickslot is a discrete, drainage solution for use with brick or stone pavers up to 63mm deep. The 10mm, AS 1428.2 and AS 3996 compliant slot blends in with paving joints giving an aesthetic solution.

The Brickslot unit is typically used on the KlassikDrain K100 channel, but can also be used on the SlabDrain H100K channel if depth restrictions are a concern. An access unit provides discrete access to the channel or in-line pit for maintenance.

Brickslot is available in both galvanised and stainless steel to meet the aesthetic needs and corrosion resistance of any application.

**Notes:**
1. Only access cover can be removed once system has been installed.
2. Brickslot connector clip to be used at every frame joint to align the slot.

**Channel with Brickslot unit**

**Channel with access unit** - use at start of run and/or where bottom or end outlet is used for maintenance.

**In-line pit with access unit** - provides access to rubbish basket and outlet pipes for maintenance.

Access cover removed

**Notes:**
1. For long runs, space Brickslot access units at 20-30 metre intervals.
